

The Above Ground Poly Cistern by THE RAIN WELL

Black and dark green colors are available. The dark colors inhibit the sunlight from entering the tank. This curbs algae growth. Minimizing algae growth ensures less cistern cleaning and no build up in the cistern outlet. The Poly Cistern is also available in tan, but must be under an enclosure out of direct sunlight.

Specifications

The above ground Poly Cistern is durable, rugged, and lightweight and perfect for water storage. The Poly Cistern comes with a 2-inch bulkhead outlet fitting, an inlet, an overflow, and an access cover. The inlet and overflow can be either a three or four inch PVC fitting. The inlet and overflow mates to a three or four inch PVC pipe using rugged self-sealing rubber grommets. Additional fittings and sight tubes are optional.

Capacity (gallons)	Height (inches)	Diameter (inches)	Lid (inches)
300	82	34	8
550	78	47	16
750	50	72	16
1000	66	72	16
1200	53	90	16
1600	68	90	16
2000	79	90	16
2500	92	96	16

The Poly Cisterns are impact and corrosion resistant and are composed of FDA approved high-density linear polyethylene for potable water storage. UV stabilizers are added to aid in resistance to environmental aging. These cisterns are seamless; made with one piece construction.

Water storage usages include **rainwater harvesting, fire suppression, water conservation, irrigation, livestock water, excess swamp cooler water, and river water storage.** The Poly Cistern is easy to move and can be used either outdoor or under an enclosure. For large rainwater storage capacity in your backyard or in remote areas, this cistern is the right choice.
