

Introducing

The *Brain* BOX™

by Munro

Simple and efficient, the BrainBox by Munro provides the pump control for rainwater harvesting. Through the use of simple float controls, the BrainBox synchronizes source water with pump requirements. If rainwater is available, the BrainBox uses the stored water first. If no rainwater is available, the BrainBox utilizes a domestic or alternate source to provide water to the pump during a run cycle.

Use your *Brain* when you harvest rain.
